

DOCSPOT: Seamless Appointment Booking for Health

1. INTRODUCTION

1.1 Project Overview

DocSpot is a full-stack web application that streamlines the process of scheduling appointments with doctors. It caters to both patients and doctors, offering functionalities such as registration, login, appointment booking, doctor availability viewing, and dashboards to manage appointments.

1.2 Purpose

The purpose of DocSpot is to digitize and simplify the healthcare appointment system. It reduces waiting times, prevents scheduling conflicts, and improves access to healthcare services for patients.

2. IDEATION PHASE

2.1 Problem Statement

Traditional healthcare appointment systems are often manual, resulting in long wait times, booking conflicts, and inefficiencies. There is a need for a digital platform to automate this process.

2.2 Empathy Map Canvas

- Users: Patients, Doctors
- Think & Feel: Need quick access to healthcare, want an easy system
- Hear: Complaints about delays, confusion in hospital queues
- See: Complex hospital forms, long queues
- Say & Do: Prefer digital interaction, desire flexible booking
- Pain: Wasted time, double booking, no real-time updates
- Gain: Easy scheduling, time-saving, real-time confirmation

2.3 Brainstorming

Ideas considered:

- Hospital queue system
- Appointment scheduling
- Doctor search by specialization/location
- File upload for patient reports

3. REQUIREMENT ANALYSIS

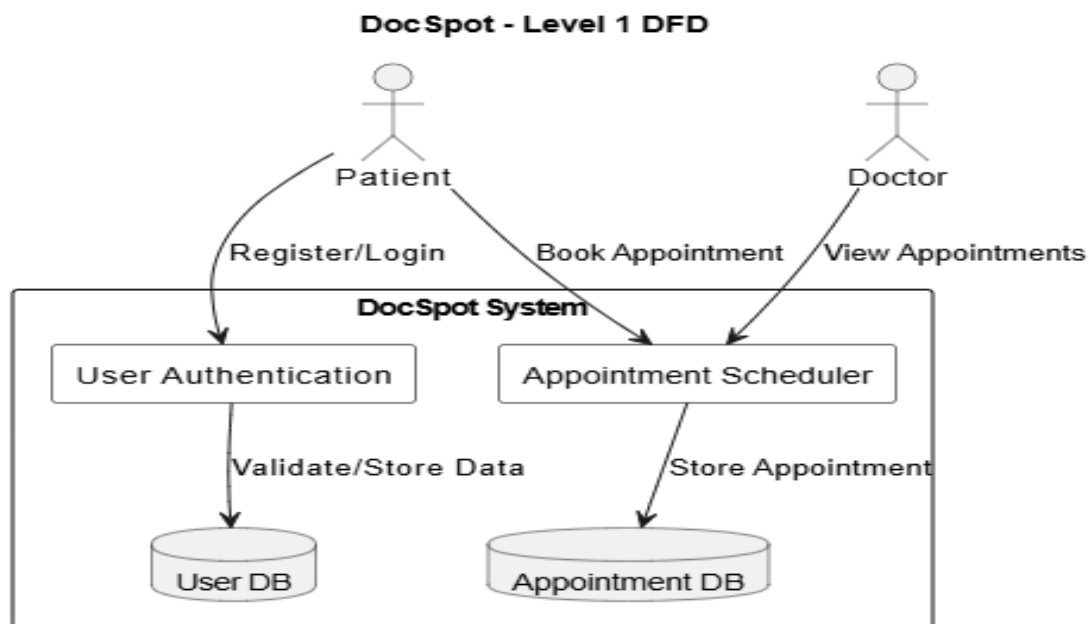

3.1 Customer Journey Map

User registers/login → Searches doctors → Views doctor availability → Books appointment → Uploads report → Views dashboard

3.2 Solution Requirement

- Functional: Registration, Login, Doctor listing, Booking, Upload, Dashboard
- Non-functional: Responsive UI, Secure login, Fast backend

3.3 Data Flow Diagram

3.4 Technology Stack

- Frontend: React.js, Bootstrap
- Backend: Node.js, Express.js
- Database: MongoDB
- Tools: Visual Studio Code, MongoDB Atlas
-

4. PROJECT DESIGN

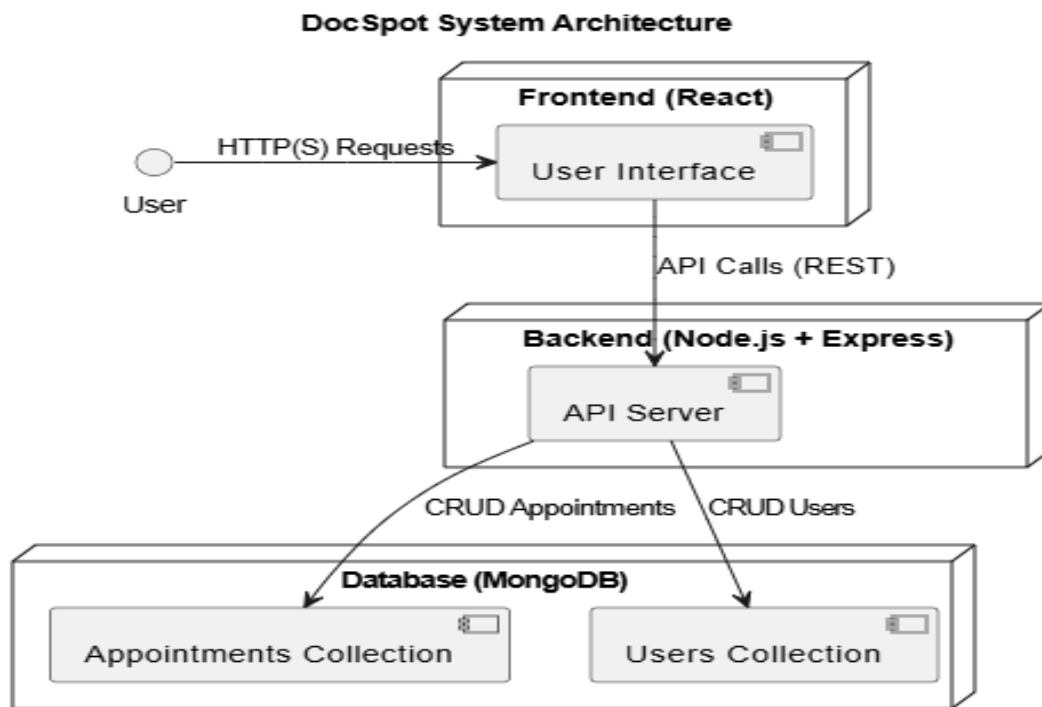

4.1 Problem Solution Fit

The solution directly addresses the appointment management issue through digitization.

4.2 Proposed Solution

A full-stack responsive web app that connects doctors and patients and allows easy scheduling.

4.3 Solution Architecture

5. PROJECT PLANNING & SCHEDULING

5.1 Project Planning

Phase	Task	Timeline
Week 1	Ideation & Requirements	2 days
Week 1	Frontend Development	3 days
Week 2	Backend Development	3 days
Week 2	Integration & Testing	2 days
Week 2	Finalization & Deployment	2 days

6. FUNCTIONAL AND PERFORMANCE TESTING

6.1 Functional Testing

- Registration: Pass
- Login: Pass
- Doctor Listing: Pass
- Appointment Booking: Pass

- Dashboard View: Pass

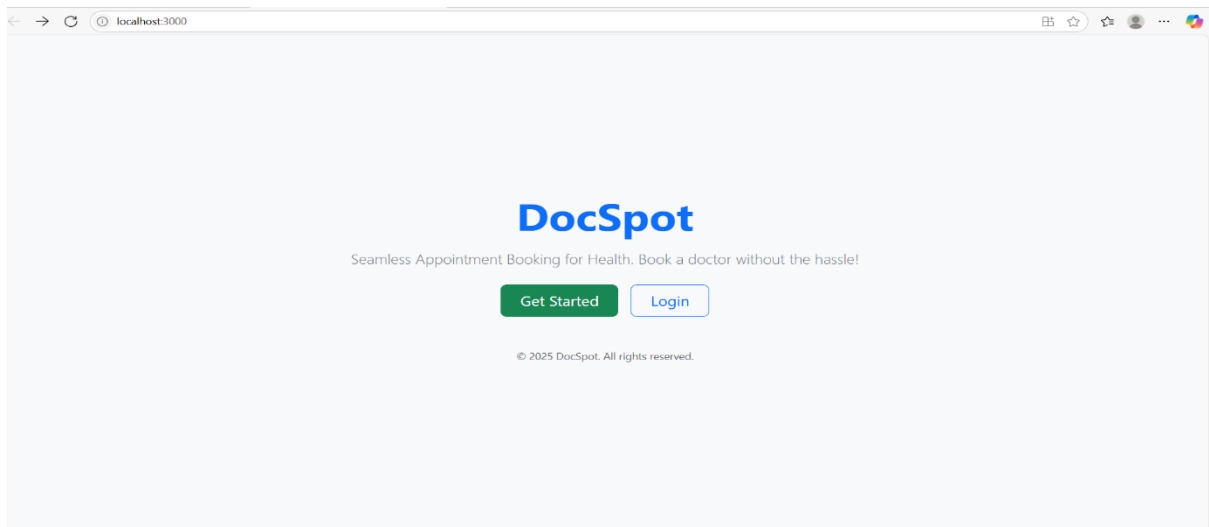

6.2 Performance Testing

- Backend API response time < 300ms
- MongoDB queries optimized

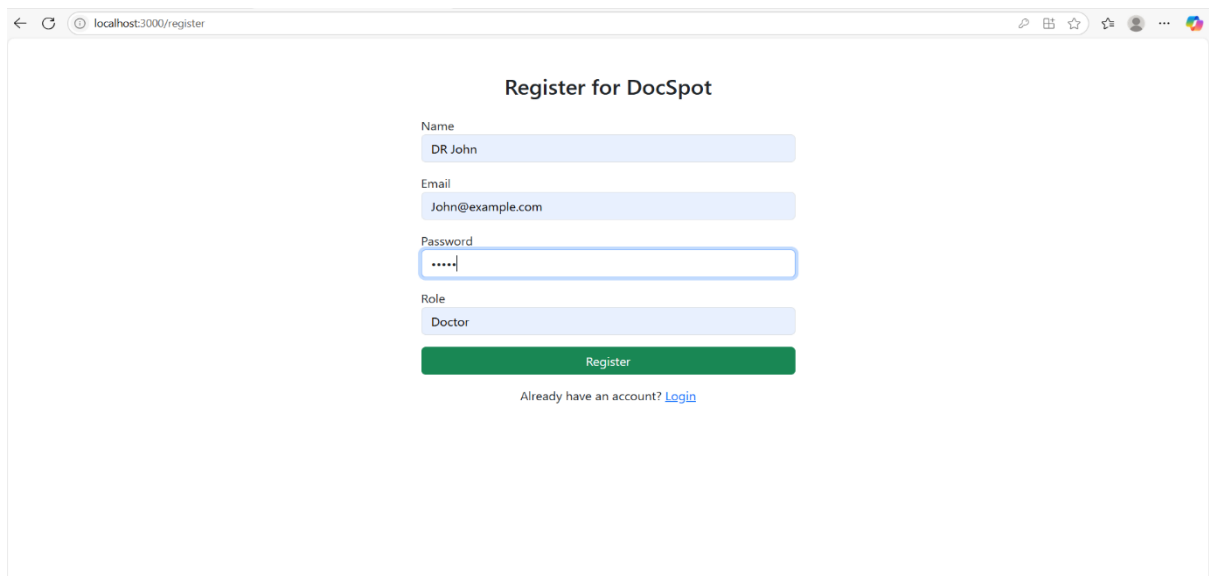

7. RESULTS

7.1 Output Screenshots

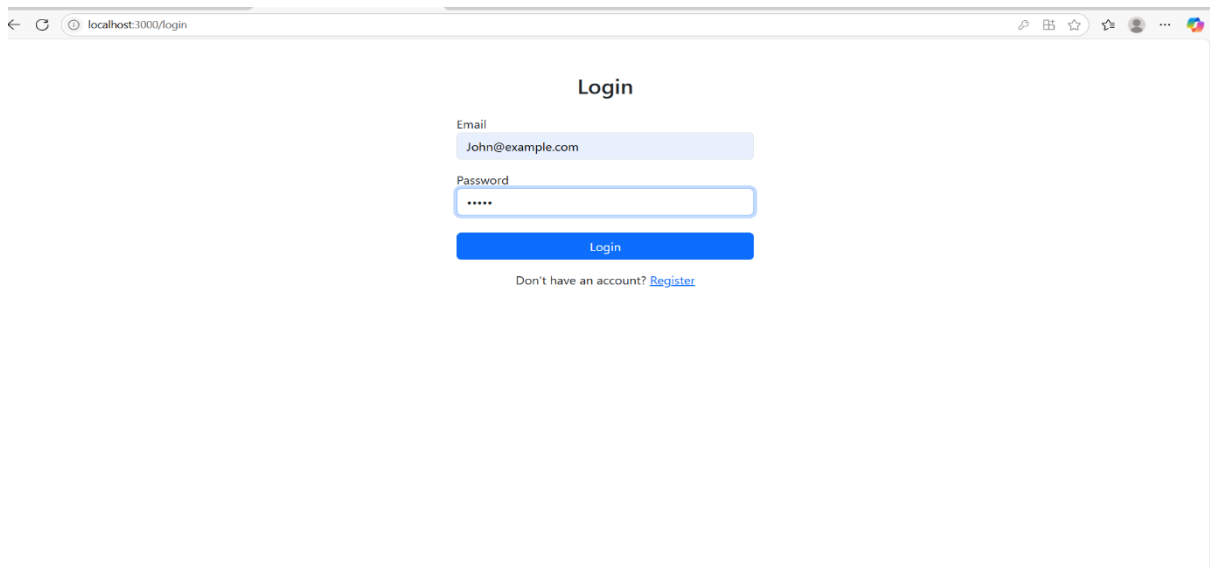

- Landing Page

- Registration page

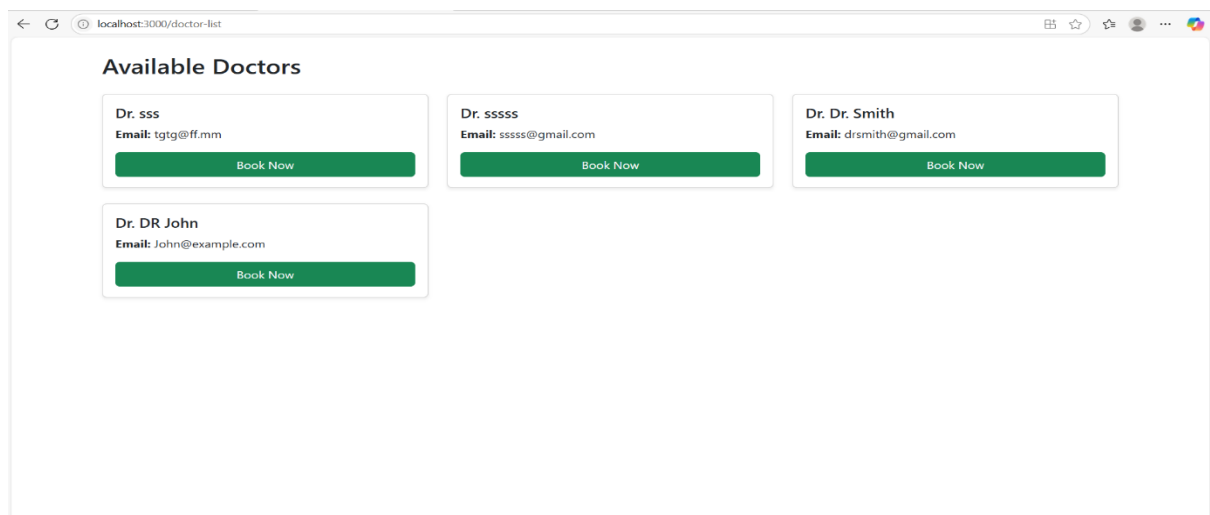

- Login page

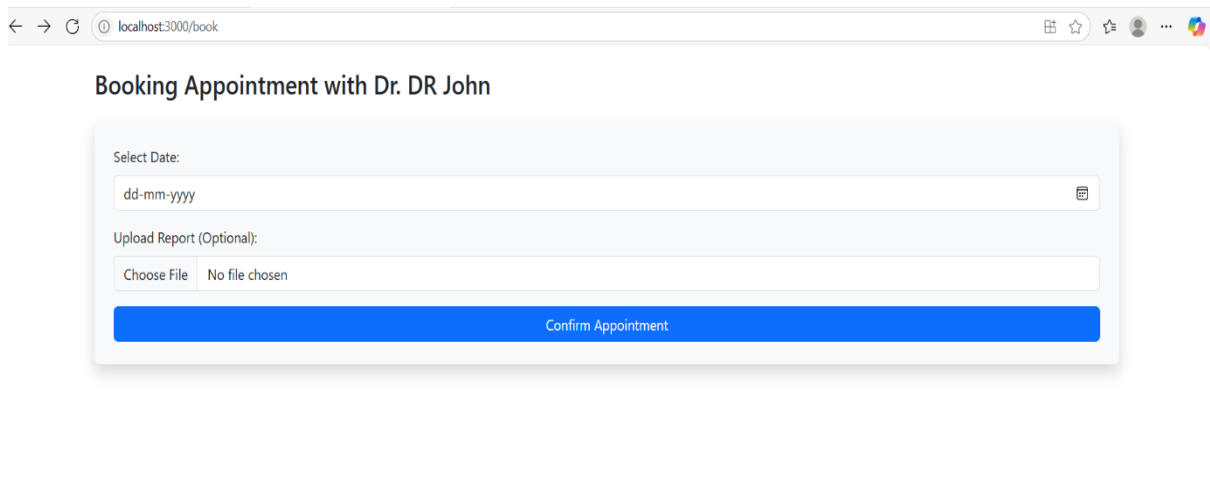

A screenshot of a web browser showing the login page at localhost:3000/login. The page has a white background with a blue header bar. The title "Login" is centered. Below it, there are two input fields: "Email" with the value "John@example.com" and "Password" with masked characters "*****". A blue "Login" button is below the password field. At the bottom, there is a link "Don't have an account? Register".

- DoctorList

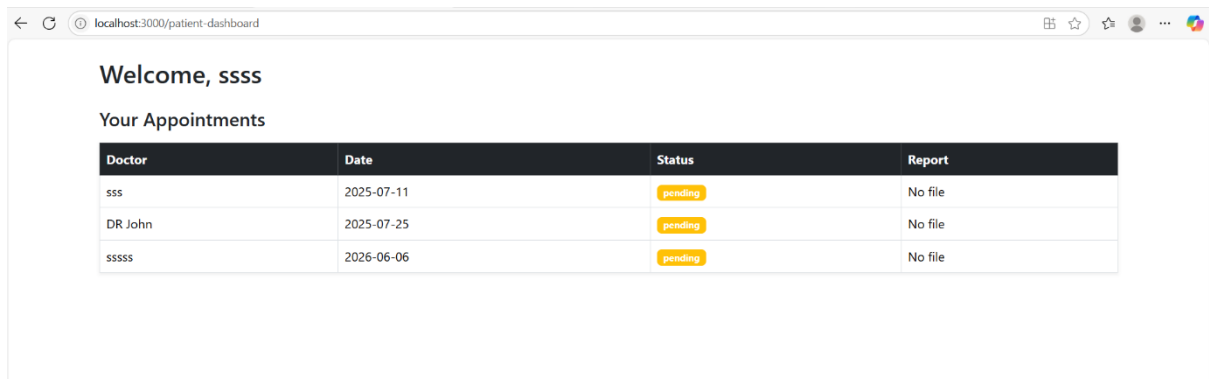

A screenshot of a web browser showing the doctor list page at localhost:3000/doctor-list. The page has a white background with a blue header bar. The title "Available Doctors" is centered. Below it, there are four doctor cards. Each card displays the doctor's name, email, and a green "Book Now" button. The doctors listed are: Dr. sss (Email: tgtg@ff.mm), Dr. sssss (Email: sssss@gmail.com), Dr. Dr. Smith (Email: drsmith@gmail.com), and Dr. DR John (Email: John@example.com).

- Booking Appointment

A screenshot of a web browser showing the booking appointment page at localhost:3000/book. The page has a white background with a blue header bar. The title "Booking Appointment with Dr. DR John" is centered. Below it, there is a form with two sections: "Select Date:" with a date input field showing "dd-mm-yyyy" and a calendar icon, and "Upload Report (Optional):" with a file upload button labeled "Choose File" and the text "No file chosen". A blue "Confirm Appointment" button is at the bottom.

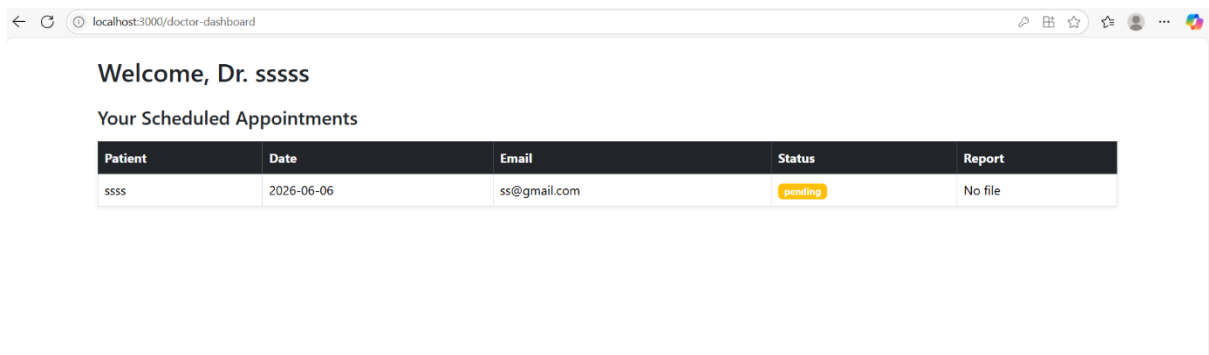

- **Patient dashboard**

The screenshot shows a web browser window with the address bar displaying 'localhost:3000/patient-dashboard'. The page content includes a welcome message 'Welcome, ssss', a section titled 'Your Appointments', and a table with the following data:

Doctor	Date	Status	Report
sss	2025-07-11	pending	No file
DR John	2025-07-25	pending	No file
sssss	2026-06-06	pending	No file

- **Doctor dashboard**

The screenshot shows a web browser window with the address bar displaying 'localhost:3000/doctor-dashboard'. The page content includes a welcome message 'Welcome, Dr. sssss', a section titled 'Your Scheduled Appointments', and a table with the following data:

Patient	Date	Email	Status	Report
ssss	2026-06-06	ss@gmail.com	pending	No file

8. ADVANTAGES & DISADVANTAGES

Advantages:

- Easy to use
- Time-saving
- Accessible 24/7

Disadvantages:

- Requires internet access
- Limited to users with digital literacy

9. CONCLUSION

DocSpot successfully digitalizes the doctor-patient appointment system and enhances efficiency in the healthcare scheduling domain.

10. FUTURE SCOPE

- Add video consultation
- Online payment integration
- Notification system

- Admin panel for hospital staff
